# My dog place

Adi Alaluf and Yuval Ohana
Mentor: Uri Globus

A one-of-a-kind search engine for finding boarding kennels for dogs by area and availability!

About us

Our goal is to help you find the most reliable, friendly and affordable boarding kennel for your dog!
Our website brings together dozens of dog boarding houses that will be happy to host it!
You can choose from the boarding kennels according to the rating, availability, geographical area and details about the dogs that will stay there

Our target audience

Mainly dog owners who want to comfortably find a solution for a reliable stay for their dog

But also owners of boarding houses for dogs who want to advertise their place and get a large pool of customers

How it works?

Any user who registers on the site can add dogs to his user.
For each dog you can enter characteristics:
Name, age, gender, breed and whether he is friendly with other dogs.

He then performs a search by city and dates, and receives a list of all available kennels according to this data.

For each kennel he can get details such as: price, rating and details about dogs that will also be staying at the boarding house on these dates.

Architecture

We used mongoDB and JS node and React.
We created models of kennels, dogs, users and reservations.

Examples of the links we created between the models: each dog is associated with a specific user on the site.
Each user can have multiple dogs.
Also, each reservation belongs to a boarding kennel and represents a dog.

You can add a kennel to the database, create a new user, add a dog to the user, view the available boarding houses and create a new reservation.

Our advantages

- Rating for each boarding house according to previous customers

- Allows you to get information about dogs that will be with your dog on these dates

- Easy and fast registration

- Fast search and booking at any time

- Comparison between dozens of boarding houses for dogs available in a city of your choice at the click of a button

Competitors in the market

There are several websites that group boarding houses for dogs, however:

- They show no available dates

- They do not allow making a reservation through the website, but it is necessary to contact the kennel directly in order to make a reservation

- There is no information about other dogs that will be accommodated in the boarding house

- Pensions appear according to a geographical area and not according to a specific city

In conclusion

The percentage of dog owners in Israel is among the highest in the world and therefore there is great business potential in creating such a convenient website for dog owners.
We also believe that the project can be developed in other business directions, as well as create a convenient interface on the part of the kennels as well.
Thank you!
